

What Is This Class???

HES 505 Fall 2025: Session 1

Matt Williamson

Welcome to Space!!

Today's Plan

- Introductions
- What can we do with spatial data?
- Course logistics and resources
- Testing out RStudio and GitHub Classroom

Introductions

About you?

- Your preferred pronouns
- Where are you from?
- What do you like most about Boise?
- What do you miss most about “home”?
- What is your research?

About Me

- What I do
- My path to this point
- Why I teach this course

A scenic landscape featuring several large, white icebergs floating in a calm body of water. The sky is filled with soft, white clouds, and the overall scene is bathed in a warm, golden light, suggesting a sunrise or sunset. The icebergs are of various shapes and sizes, some with visible textures and shadows. The water reflects the light from the sky and the icebergs.

What can we do with spatial data?

What is geography

- **Geo:** land, earth, terrain
- **Graph:** writing, discourse
- Tuan: **Space** (extent) and **Place** (location)
- Analysis of the effects of extent and location on events or features

Five Themes in Geography

- **Location**
 - **Absolute Location**
 - Latitude and Longitude
 - Map Coordinates
 - **Relative Location**
 - Proximity to other places
 - Direction and Distance
- **Place**
 - Physical Features (e.g., climate, topography)
 - Human Features (e.g., culture, language)
- **Human-Environment Interaction**
 - How humans modify the environment
 - How the environment affects human activities
- **Movement**
 - Migration of people
 - Trade and the flow of goods and services
- **Region**
 - Areas defined by common characteristics
 - Regions can be defined by physical or human features

- Location
- Place
- Region
- Movement
- Human-
Environment
Interaction

WGBH Educational Foundation

Location

The place (on Earth) of a particular geographic feature

Place

What is a location *like*?

Region

What attributes to different geographies share? What distinguishes them?

Movement

How do genes, individuals, populations, ideas, goods, etc traverse the landscape.

Human-Environment Interactions

How do people relate to and change the physical world to meet their needs?

Towards *quantitative* spatial analysis

‘everything is usually related to all else but those which are near to each other are more related when compared to those that are further away’.

Waldo Tobler

3 “Faces” of Analysis

Description

Explanation and Inference

- **Cognitive Description:** collection ordering and classification of data
- **Cause and Effect:** design-based or model-based testing of the factors that give rise to geographic distributions
- **Systems Analysis:** describes the entire complex set of interactions that structure an activity

Prediction

- Extend description or explanation into unmeasured space
- Stationarity: the rules governing a process do not *drift* over space-time

Class Details

Logistics

- Meet on Mondays and Wednesdays
- ~40 min lecture, 30 min practice
- 5 major sections
- A note about readings

“Office Hours” immediately following class

Course Webpage

<https://isdrrfall25.classes.spaseslab.com/>

- Syllabus
- Schedule
- Lectures
- Assignments
- Resources

Assignments

Check out the syllabus for more on grading!

- **Self-reflections (2x)**
 - Your goals for the course
 - Evaluation criteria
- **In-class exercises (30x)**
 - Problem solving
 - Reproducible workflows
 - Muscle memory
- **Final project (1st draft, final draft):** Practice a full analysis workflow; Integrate analysis & visuals to tell a story
- **Homework Assignments (5x)**
 - Integrate skills from the section
 - Practice visualization
 - Build version control habits
- **Code Revisions (5x)**
 - Common issues
 - More extensive feedback

Wrapup

Checking in

1. What can I clarify about the course?

ATLAS ORBIS TERRARUM
MERIDIANO TABB,

DELINEATIO SINGULARI
RUDOLPHI

RATIONE ACCOMMOD
ASTRONOMICARUM

End
